

## Forklift Fork Positioner

Forklift Fork Positioner - A fork positioner is actually an apparatus constructed out of high quality materials intended to withstand the most difficult operations and work environments. This particular piece of equipment can enable the one driving to operate the blades hydraulically without leaving the seat. Side shifting models have the added ability to be able to laterally position the entire load or the arms so as to facilitate much more exact carrying and position in a quicker and more efficient method.

The fork pocket is rather unique and can enable the individual operating it to be able to safely swing the forks into position without any fear of destroying the positioning cylinders. This could allow the operator the choice to be able to execute simultaneous or independent fork movement, depending on the job requirement. For most forklifts with non-OEM carriages, complete carriages are needed. Standard OEM carriages could be transformed into blade positioners on existing units.
