

Carriage Roller

Carriage Rollers - Carriage rollers are particularly designed bearings that are used on lift masts to be able to help them operate in difficult environmental conditions. Lift masts are frequently subjected to shocks, oscillations, vibrations and high dynamic and static loads. This apparatus is often exposed to environmental influences like dust, cold, heat, aggressive ambient air, moisture and contamination. Thus, the lift masts' guidance arrangements must be specifically robust and have a specific high load carrying capacity.

In order to help compete in numerous various environmental conditions, carriage rollers were designed for many lift masts. While having the ability to deal with a particularly high load carrying capacity, these bearings provided a cost-effective operational security for the lift masts' guidance arrangements.
