The U.S. lift Truck division located in Cleveland has a skilled team knowledgeable in Product Sales, Purchasing, Marketing, Logistical and Technical Support.

Korea's initial domestic lift truck marketplace was an open-import enterprise. In the 1960's, Korea Machinery Co. Ltd. started to import assembled forklifts as part of a national equipment expansion venture. Initial sales of this manufacturing equipment focused on large business groups, the armed services and on state-run corporations. This ultimately led to a merger with Daewoo Heavy Industries Ltd. In 1976, the Forklift Division begun business operations throughout Korea to service and sell this heavy equipment. By 1978, a lift truck manufacturing plant was successfully completed. Continuous technical training grew to become the new focus for improving quality and product development.

Home-based forklift trade for Daewoo started in 1967 and grew to an astonishing 90% market share in Korea. By the 1980's, Daewoo's superior technological enhancements combined with sales success placed them in a situation of considerable expansion of their forklift operations.

In 1981, Caterpillar Industrial Inc. of the United States, proposed a cooperative venture project to respond to competitive pressures in the US materials handling market. This project greatly expanded Daewoo's lift truck sales. Construction was completed in 1984 to facilitate a new plant which helped launch the company for the manufacture of high added-value products suitable for export. In 1993, the company had a international sales system and started exporting models they had developed through in-house expertise, as an sovereign brand. Certifications were then acquired from CE of Europe, UL of the United States and ISO 14001 and ISO 9001, securing growth opportunities into overseas markets.
